OriusPay Case Study: Social Media Posts (2026)

Nov 5, 2026 · @Uzair Rasheed

2026 rules followed

Every post uses only facts from the design file and the brief (UI/UX design and development by Adelogix, 2026): no invented results, user numbers or growth claims.

Platform	Rule applied	Source
Instagram	Max 5 hashtags per post or Reel, caption and first comment combined	InstantDM, SocialCal
LinkedIn	Hook in the first ~150 characters, before "see more"	Wild and Free Tools
LinkedIn	Keywords in the sentences, 4 hashtags	LinkedInPreview
LinkedIn	PDF carousel suits case studies	Socialkit
LinkedIn	Links: body link-free, link in first comment (end of post also works)	Jobmentis
Dribbble	10–15 relevant tags; irrelevant tags lower ranking	Dribbble Help, Postiz
Behance	5–10 relevant tags, broad and niche mixed	UniLink

English

Hook: Most merchant dashboards show you the money. Very few help you act on it.

Re-hook: For OriusPay, we designed and built one that does both: from the first payment to the final VAT document.

Details:

OriusPay is a merchant finance dashboard. Adelogix handled it end to end: UI/UX design and development.

What a merchant gets in one web app:

→ **A dashboard that puts action first:** eight KPI cards, cash flow, a transaction pipeline, plus a KYC banner and failed-payment alert at the very top.

→ **Horus, a built-in AI assistant:** opens on any screen with ready prompts like "Show today's revenue" and "Find failed transactions".

→ **Quick Actions:** create a payment link or QR code, or export data, without leaving the page.

→ **Money flows with full detail:** transactions, refunds, chargebacks, disputes and payouts. Each one opens a side drawer with the complete record.

→ **Compliance and control:** VAT documents with clear review status, roles and permissions, costs and profitability.

→ **Security that feels like a bank:** MFA with ten recovery codes, a trusted-device limit and session-expiry handling.

All 17 modules live in one sidebar. Every screen comes with designed loading, empty, success and error states, and everything sits on one design system built on Outfit and a ten-step colour scale.

Our process had 7 steps: discovery → information architecture → wireframes → UI design and system → development → QA → launch. One team ran all of it, so what was approved is what shipped.

Swipe through the full case study. 👉

Question to drive comments: In a finance dashboard, what matters more to you: seeing the numbers, or the shortcut to act on them?

Roman English

Hook: Zyada tar merchant dashboards sirf paisa dikhate hain. Bohat kam us par action lene mein madad karte hain.

Re-hook: OriusPay ke liye humne aisa dashboard design bhi kiya aur develop bhi kiya jo dono kaam kare: pehli payment se le kar aakhri VAT document tak.

Details:

OriusPay ek merchant finance dashboard hai. Adelogix ne isay end to end banaya: UI/UX design aur development dono.

Ek hi web app mein merchant ko kya milta hai:

→ **Dashboard jahan action pehle hai:** aath KPI cards, cash flow, transaction pipeline, aur sab se upar KYC banner aur failed-payment alert.

→ **Horus, built-in AI assistant:** har screen par khulta hai, ready prompts ke saath jaise "Show today's revenue" aur "Find failed transactions".

→ **Quick Actions:** page chhore baghair payment link ya QR code banao, ya data export karo.

→ **Paise ka poora hisaab:** transactions, refunds, chargebacks, disputes aur payouts. Har ek side drawer mein poori detail ke saath khulta hai.

→ **Compliance aur control:** VAT documents ka clear review status, roles aur permissions, costs aur profitability.

→ **Bank jaisi security:** MFA ke saath das recovery codes, trusted-device limit, aur session expiry.

17 modules ek hi sidebar mein hain. Har screen ki loading, empty, success aur error states design ki gayi hain, aur sab kuch Outfit aur das-step colour scale wale ek design system par khara hai.

Hamara process 7 steps ka tha: discovery → information architecture → wireframes → UI design aur system → development → QA → launch. Ek hi team ne sab chalaya, is liye jo approve hua wohi ship hua.

Poori case study swipe karke dekhein. 👉

Question: Finance dashboard mein aap ke liye kya zyada zaroori hai: numbers dekhna, ya un par foran action lene ka shortcut?

English

Hook: Payments, payouts and paperwork, all behind one sidebar. 💳

Re-hook: Here's how we designed and developed OriusPay, a finance dashboard for merchants.

Details:

OriusPay brings everything a merchant handles every day into one web app:

- ✅ A dashboard with KPIs, cash flow and a transaction pipeline
- ✅ Horus, an AI assistant that answers questions like "Show today's revenue"
- ✅ Quick Actions for payment links, QR codes and data exports
- ✅ Refunds, disputes and payouts, each with full details
- ✅ VAT documents, roles, permissions and cost tracking
- ✅ Secure sign-in with MFA and recovery codes

Designed and developed by the Adelogix Software Technology team. 🚀

Hook: Payments, payouts aur paperwork, sab ek hi sidebar ke peeche. 💳

Re-hook: Dekhein humne OriusPay kaise design aur develop kiya, merchants ke liye ek finance dashboard.

Details:

OriusPay merchant ka roz ka saara kaam ek web app mein le aata hai:

- ✅ KPIs, cash flow aur transaction pipeline wala dashboard
- ✅ Horus, AI assistant jo "Show today's revenue" jaise sawalon ka jawab deta hai
- ✅ Payment links, QR codes aur data export ke liye Quick Actions
- ✅ Refunds, disputes aur payouts, har ek poori detail ke saath
- ✅ VAT documents, roles, permissions aur cost tracking

- ✅ MFA aur recovery codes ke saath secure sign-in

Design aur development: Adelogix Software Technology team. 🚀

4. Behance

Project title: OriusPay: Merchant Finance Dashboard, UI/UX Design & Development

Tagline: Payments, payouts, compliance and an AI assistant, in one web app.

Description (English)

Hook: A merchant shouldn't need five tools to understand one day of business.

Re-hook: OriusPay puts payments, payouts and paperwork behind one sidebar, and we designed and built all of it.

Overview: OriusPay is a finance dashboard for merchants. Merchants follow revenue and transactions, handle refunds and disputes, request payouts, file VAT documents, track costs and manage stores. Horus, an AI assistant, is available on every screen.

- **Our role:** UI/UX design and development
- **Platform:** Web app (desktop)
- **Year:** 2026

Our process (7 steps): Discovery → Information architecture → Wireframes → UI design & design system → Development → QA & testing → Launch & support.

Key design decisions:

1. **Action first.** The dashboard opens with the KYC banner and failed-payment alerts, then eight KPI cards, cash flow and the transaction pipeline.
2. **17 modules, one sidebar.** They are ordered the way a merchant works: daily view, money, compliance, business tools, then settings.
3. **Horus and Quick Actions.** Ready prompts and one-click payment links, QR codes and exports.
4. **Every record in a drawer.** Transactions, refunds and payouts open side drawers with the full breakdown, plus receipt and evidence downloads.
5. **Calm compliance.** VAT documents show a clear Verified, Expired, Rejected or Pending Review status.
6. **Security built in.** MFA with ten recovery codes, a trusted-device limit and session-expiry messages.
7. **Nothing left undesigned.** Skeleton loaders, empty states, and one pop-up pattern for success, errors, confirmations and deletes.

Design system: Outfit typeface, Deep Blue brand colour (#121B60) and six ten-step colour scales.

Thank you for watching. 🙏

Designed and developed by Adelogix Software Technology · adelogix.com

Description (Roman English)

Hook: Ek din ka business samajhne ke liye merchant ko paanch tools nahi chahiye hone chahiye.

Re-hook: OriusPay payments, payouts aur paperwork ko ek sidebar ke peeche le aata hai, aur yeh sab humne design aur develop kiya.

Overview: OriusPay merchants ke liye finance dashboard hai. Merchant revenue aur transactions dekhta hai, refunds aur disputes handle karta hai, payout request karta hai, VAT documents upload karta hai, costs track karta hai aur stores manage karta hai. Horus, AI assistant, har screen par available hai.

- **Hamara role:** UI/UX design aur development
- **Platform:** Web app (desktop)

- **Saal:** 2026

Hamara process (7 steps): Discovery → Information architecture → Wireframes → UI design & design system → Development → QA & testing → Launch & support.

Main design decisions:

1. **Action pehle.** Dashboard KYC banner aur failed-payment alerts se shuru hota hai, phir aath KPI cards, cash flow aur pipeline.
2. **17 modules, ek sidebar.** Usi tarteeb mein jaise merchant kaam karta hai.
3. **Horus aur Quick Actions.** Ready prompts, aur ek click mein payment link, QR code aur export.
4. **Har record drawer mein.** Transactions, refunds aur payouts ki poori detail side drawer mein, receipt aur evidence download ke saath.
5. **Calm compliance.** VAT documents ka clear status: Verified, Expired, Rejected, Pending Review.
6. **Security andar se.** MFA, das recovery codes, trusted-device limit aur session expiry.
7. **Koi screen adhoori nahi.** Loading, empty states aur ek pop-up pattern har message ke liye.

Dekhne ka shukriya. 🙏

5. Dribbble

Post as a series with the Cover as the first shot. Dribbble's guidelines discourage links and sales pitches in shot descriptions, so these are written purely about the work.

Shot title: OriusPay: Merchant Finance Dashboard

Description (English)

A finance dashboard built to act on, not just to read.

This shot shows OriusPay's main dashboard: a KYC banner and failed-payment alert on top, then eight KPI cards, cash flow, the transaction pipeline and recent transactions. Horus, the built-in AI assistant, sits one click away.

The full project covers 17 modules: transactions, refunds and disputes, payouts, VAT and compliance, roles, costs and secure sign-in with MFA. All of it was designed and developed by our team.

Outfit type, Deep Blue and a calm, ledger-like layout.

Which screen should we post next: Horus AI or the sidebar map? 👇

Description (Roman English)

Aisa finance dashboard jis par sirf nazar nahi, action liya jaye.

Is shot mein OriusPay ka main dashboard hai: upar KYC banner aur failed-payment alert, phir aath KPI cards, cash flow, transaction pipeline aur recent transactions. Horus AI assistant ek click door hai.

Poore project mein 17 modules hain: transactions, refunds aur disputes, payouts, VAT aur compliance, roles, costs aur MFA ke saath secure sign-in. Design aur development dono hamari team ne kiye.

Agli screen kaunsi share karein: Horus AI ya sidebar map? 👇

Series titles for the next shots

1. OriusPay: Horus AI & Quick Actions
2. OriusPay: Sidebar Map, 17 Modules
3. OriusPay: Money Flows
4. OriusPay: VAT & Compliance
5. OriusPay: Secure Sign-in & MFA

6. OriusPay: States & Feedback
7. OriusPay: Design System

6. X (Twitter) thread

1/ Most merchant dashboards show the money. Few help you act on it.

We designed and developed OriusPay to do both. 🧵

2/ The dashboard puts action first: the KYC banner and failed-payment alert sit on top, then KPIs, cash flow and the transaction pipeline.

3/ Horus, the built-in AI assistant, is ready on every screen:

"Show today's revenue"

"Find failed transactions"

"Generate monthly report"

4/ 17 modules, one sidebar. Refunds, payouts, VAT documents, roles and costs each open a full detail drawer.

5/ Security: MFA, ten recovery codes, a trusted-device limit and session expiry.

Design & development: Adelogix.

Roman English version of tweet 1

Zyada tar merchant dashboards sirf paisa dikhate hain. Bohat kam us par action lene dete hain.

OriusPay humne dono ke liye design aur develop kiya. 🧵

Before you post

- [ ] Publish on Behance first, then use that link on LinkedIn and X
- [ ] Reply to comments within the first hour after posting
- [ ] Use the Cover image first on every platform

- [ ] Never present the figures on the screens (€45,874.90, 97.2% and so on) as real results; they are sample data in the design
- [ ] Ask OriusPay before tagging them publicly
