Most fitness apps ask you to do the work. This one asks you questions first.

In 2023, Adelogix designed, built and deployed Uplift.ai for a client: an AI fitness coach that brings training, meals and daily health into one mobile app.

The hard part wasn't any single feature. It was fitting five kinds of data on one small screen: calories, macros, workouts, activity and an AI coach, each with its own numbers and inputs.

Our answer was a few patterns used everywhere:

- One large figure leads every data screen
- One question per step in a six-step assessment
- One list row for notifications, search and settings

What we delivered:

- UX and UI design across 11 user flows
- A design system with named colour, type and effect styles
- App development
- Deployment

Timeline: about 3–4 months, from first screens to a live app.

If you're planning an app that has a lot to show, we'd be glad to hear about it.

Zyada tar fitness apps aap se kaam karwati hain. Yeh app pehle aap se sawal karti hai.

2023 mein Adelogix ne apne client ke liye Uplift.ai design, develop aur deploy ki. Yeh ek AI fitness coach hai jo training, meals aur daily health ko ek mobile app mein le aati hai.

Mushkil kaam koi ek feature nahi tha. Asal challenge yeh tha ke paanch qism ka data ek chhoti screen par saaf dikhe: calories, macros, workouts, activity aur AI coach, sab ke apne numbers aur inputs.

Hamara hal tha kuch patterns jo poori app mein use hon:

- Har data screen ek bara number se shuru hoti hai
- Six-step assessment mein har step par sirf ek sawal
- Notifications, search aur settings ke liye ek hi list row

Humne kya deliver kiya:

- 11 user flows par UX aur UI design
- Colour, type aur effect styles ke saath design system
- App development
- Deployment

Timeline: taqreeban 3–4 mahine, pehli screen se live app tak.

Agar aap bhi koi app plan kar rahe hain jis mein bohat kuch dikhana hai, to hum se baat karein.

What if your fitness app knew your goal before it gave you a plan? 💪

Meet Uplift.ai, an AI fitness coach we designed, developed and deployed for a client in 2023.

A short six-step assessment comes first. After that the app guides workouts, logs meals from a photo with AI Scan, tracks activity, and answers questions in chat.

Clean screens, one clear number at a time, and a coach that's always one tap away.

Built by Adelogix in about 3–4 months, from design to deployment.

Swipe through the case study and tell us which screen you like most 👇

Roman Urdu

Agar aap ki fitness app plan dene se pehle aap ka goal jaanti ho to? 💪

Milye Uplift.ai se, ek AI fitness coach jo humne 2023 mein apne client ke liye design, develop aur deploy kiya.

Pehle ek chhota six-step assessment hota hai. Us ke baad app workouts guide karti hai, AI Scan se photo le kar meal log karti hai, activity track karti hai aur chat mein sawalon ke jawab deti hai.

Saaf screens, har waqt ek wazeh number, aur coach hamesha ek tap door.

Adelogix ne taqreeban 3–4 mahine mein design se deployment tak tayyar kiya.

Case study dekhein aur batayein aap ko kaun si screen sab se achi lagi 👇

Title: Uplift.ai: AI Fitness Coach App | UI/UX Design & Development

English description

Uplift.ai is a mobile fitness app that combines training, meals and daily health tracking with an AI coach. Adelogix Software Technology designed, developed and deployed it for a client in 2023, over about three to four months.

The main challenge was clarity. The app handles calories, macros, workouts, activity and AI chat, each with its own data. We solved this with a small set of repeated patterns: one lead figure per data screen, one question per assessment step, and one list row used across the app.

This case study covers the product overview, key features, the design system, the core user flow and our process.

Services: UI/UX Design · Design System · App Development · Deployment

Roman Urdu description

Uplift.ai ek mobile fitness app hai jo training, meals aur daily health tracking ko ek AI coach ke saath jorti hai. Adelogix Software Technology ne yeh 2023 mein client ke liye taqreeban 3–4 mahine mein design, develop aur deploy ki.

Asal challenge clarity tha. App calories, macros, workouts, activity aur AI chat sab handle karti hai. Humne isay kuch repeated patterns se hal kiya: har data screen par ek main number, assessment ke har step par ek sawal, aur poori app mein ek hi list row.

Is case study mein product overview, key features, design system, core user flow aur hamara process shamil hai.
